Instructions to run the project

- 1) Download the s13897–EAD movie.zip file and extract the file.
- 2) Open the extracted file from NetBeans IDE.

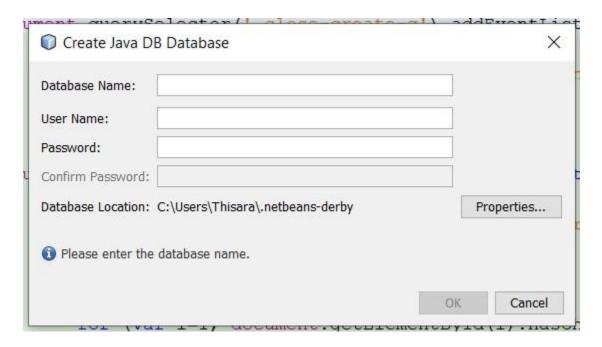

3) Right click on the Java DB and select create database.

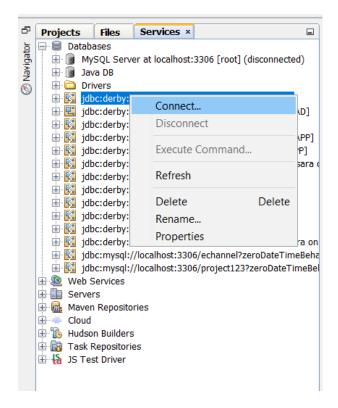

NetBeans IDE 8.0.2

File Edit View Navigate Source Refactor Run Debug Profile **Projects Files** Services × **Favorites** Databases MySQL Server at localhost:3306 [root] (disconnected) ∄ Java DR 🖽 🧀 Driv Start Server 🕀 🔀 jdb nnel [app on APP] Stop Server 🗓 🛂 jdb annelNew [app on APP] Create Database... 🕀 🛐 jdb [Corner [root on APP] i idb Properties... p [mydb on MYDB] jdbc:gerpy://localnost:152//UnlineExamination [exam on EXAI idbc:derby://localhost:1527/sample [app on APP]

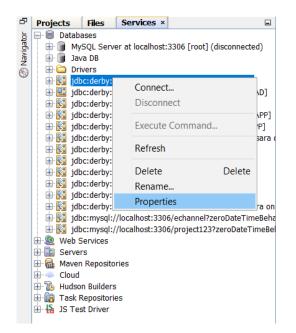

4) Put a name to the database and create user name and a password.

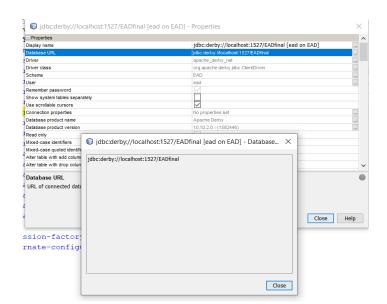

5) Right click on the created connection and select execute command.

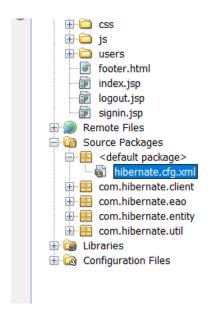

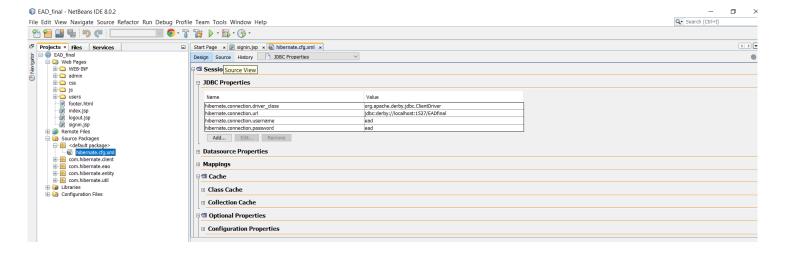

6) Open connection properties and copy the database URL.

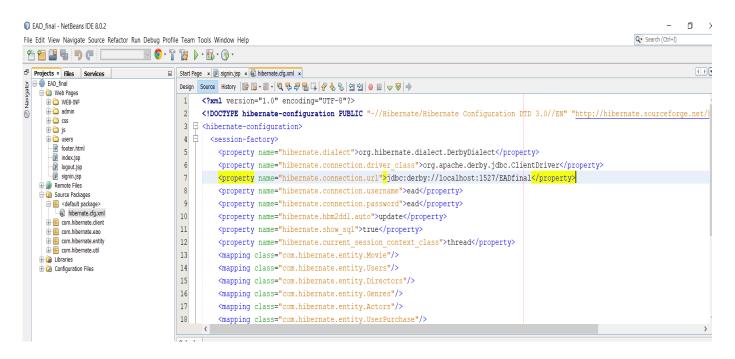

7) Open the code in hibernate.cfg.xml file.

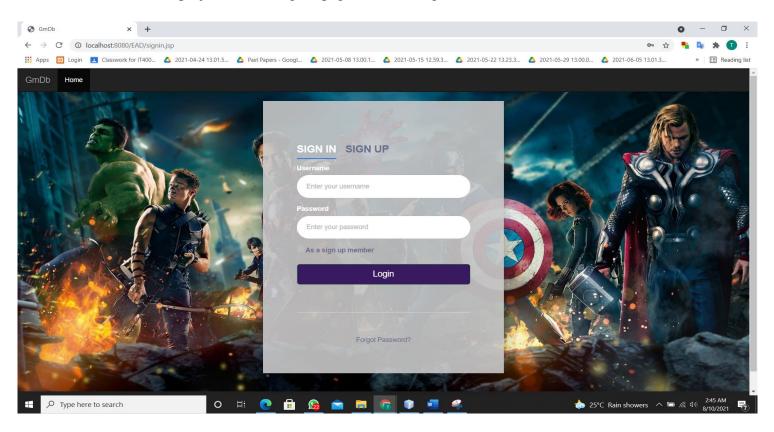

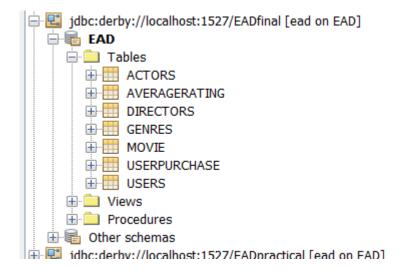

8) Paste the copied database URL and edit your user name and password.

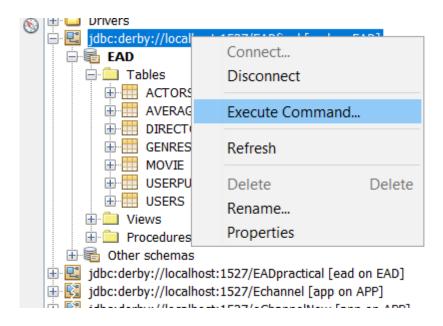

- 9) Create a glassfish server if you haven't created before
- 10) Run the EAD project. Go to SignIn page and click login button. Then the table was created.

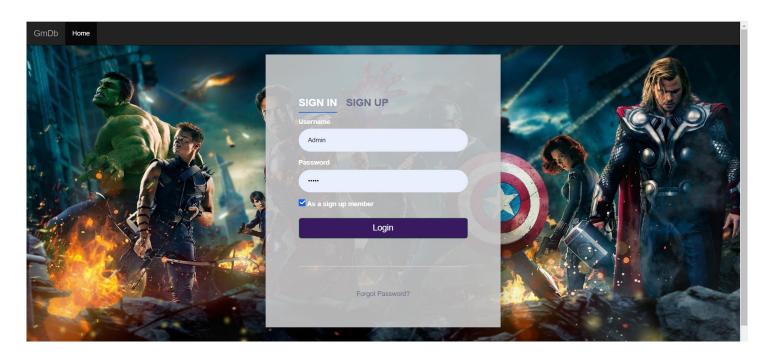

11) Go to Created database and right click get Execute Command window.

12) Copy query in databaseQuery.txt and paste that queries in Execute Command window and Run all statements.

```
Connection: jdbc:derby://localhost:1527/EADfinal [ead on EAD]
